----	----	------	------------	-----------	-----------------------	-------------	------------	---------------	---------------	-----------------	------------------

This file contains both E/λ data for elements, and calculated L-values for common crystals on JEOL EPMA's. Tabulated values contain data for n=1,2,3, for L-values between 65 and 260 mm (actual working range might be less depending on spectrometer/crystal configuration)

$$E(KeV) = \frac{12.396}{\lambda(\text{Å})}$$

$$L\text{-value} = n\lambda \frac{2R}{2d}$$
